2012-2016

# Distressed Communities Index Definitions

The Distressed Communities Index (DCI) is a comparative measure of the vitality and wellbeing of U.S. communities.

The DCI combines seven complementary metrics into a holistic measure of comparative community economic well-being. The components are:

**No high school diploma:**

Percent of the 25+ population without a high school diploma or equivalent

**Housing vacancy rate:**

Percent of habitable housing that is unoccupied, excluding properties that are for seasonal, recreational, or occasional use

**Adults not working:**

Percent of the prime-age (25-64) population not currently employed.

**Poverty rate:**

Percent of the population living under the poverty line

**Median income ratio:**

Median household income as a percent of the state's median household income (to adjust for cost of living differences)

**Change in employment:**

Percent change in the number of jobs

**Change in establishments:**

Percent change in the number of business establishments

Each component is weighted equally in the index, which is calculated by ranking communities on each of the seven metrics, taking the average of those ranks, and then normalizing the average to be equivalent to a percentile. Distress scores range from approaching zero to 100.0, such that the zip code with the average rank of 12,500 out of 25,000 will register a distress score of 50.0. Communities are then grouped into quintiles, or fifths. The best-performing quintile (with distress scores of 0 to 20.0) is considered “prosperous,” the second-best “comfortable,” the third “mid-tier,” the fourth “at risk,” and the fifth, or worst-performing (with distress scores of 80.0 to 100), “distressed.”

The underlying data comes from the U.S. Census Bureau's American Community Survey 5-Year Estimates and Business Patterns products. In all, the DCI captures 99 percent of the U.S. population and all 25,800-plus zip codes with at least 500 residents.

For a full description of the methodology underlying the DCI, see [eig.org/dci/methodology](http://eig.org/dci/methodology).

Note: Data restricted to Title IV degree granting institutions. Data reflect in-migrants from U.S. territories and foreign countries. Out migrants to foreign countries cannot be accounted for.

# Modeling Achievement of Vermont's State Attainment Goal

# NCHEMS' Student Flow Model

At current rates, Vermont will be short of its 70% by 2025 statewide attainment goal by 48,000. Relative to award production levels in 2018-19, the state's institutions will produce 60 fewer certificates, 70 fewer associate's degrees, and 700 fewer bachelor's degrees cumulatively by 2024-25.

# Modeling Scenarios & Results

Scenario 1	<b>Focus on the traditional pipeline</b>	
	Increase HS graduation rate	89.1 -> 90.4
	Boost direct college-going rate	52.6 -> 74.8
	Yields	4,600 (340 Certs; 360 Assoc; 3,900 Bach)
Scenario 2	<b>Focus on adult participation</b>	
	Increase participation rate	1.33 -> 4.75
	Yields	8,680 (1,120 Certs; 2,380 Assoc; 5,180 Bach)
Scenario 3	<b>Focus on completion to U.S. Average</b>	
	Increase two-year	29.0 -> 32.8
	Increase public bacc/master's	21.5 -> 24.1
	Increase public research	No change
	Yields	930 (50 Certs; 360 Assoc; 520 Bach)

# Modeling Scenarios & Results

Scenario  
4

Focus on completion to best-performing state	
Increase two-year (10% above U.S. average)	29.0 -> 36.1
Increase public bacc/master's (best)	21.5 -> 28.6
Increase public research (best)	24.4 -> 31.6
Yields	4,470 (150 Certs; 790 Assoc; 3,530 Bach)

5

Improvements Everywhere	
Increase HS graduation rate	89.1 -> 90.4
Boost direct college-going rate	52.6 -> 74.8
Increase participation rate	1.33 -> 4.75
Increase two-year (10% above U.S. average)	29.0 -> 36.1
Increase public bacc/master's (best)	21.5 -> 28.6
Increase public research (best)	24.4 -> 31.6
Yields	21,000 (1,840 Certs; 4,110 Assoc; 15,050 Bach)

# Summary of Modeling Scenarios

- Vermont could make significant improvements in all aspects of participation and completion and still fall well short of the credential requirements to meet its goal.
- This is partly due to the heavy emphasis on bachelor's degrees in the state; the burden of producing sub-baccalaureate credentials is confined to 1-2 institutions with only a small share of the market.
- It is also the consequence of poor performance on degree productivity measures in the VSC institutions, and likely because CCV and VTC are underinvested in certificate programs relative to other undergraduate awards.
- These results reinforce the observation that achieving educational attainment targets will require the retainment of home-grown talent and the recruitment of talent from elsewhere.

# Vermont's Heavy and Increasing Reliance on Tuition Revenue

Public FTE Enrollment, Education Appropriations Per FTE, and Net Tuition Revenue Per FTE, Vermont, FY 1994-2019 (Constant Adjusted Dollars)

**Notes:**

1. Full-time equivalent enrollment converts student credit hours to full-time, academic year students, but excludes medical students.
2. Education appropriations are a measure of state and local support available for public higher education operating expenses, excluding appropriations for research, hospitals, and medical education.
3. Net tuition revenue is calculated by taking the gross amount of tuition and fees, less state and institutional financial aid, tuition waivers or discounts, and medical student tuition and fees.
4. Constant dollars adjusted by the Higher Education Cost Adjustment (HECA).
5. Adjusted to account for interstate differences using the Enrollment Mix Index (EMI).
6. Adjusted to account for interstate differences using the Cost of Living Index (COLI). The COLI is not a measure of inflation over time.
